

## Hanging the clocks

### **Drywall anchors**

Generally speaking, anchors expand and “bite” into the wall as you sink a screw into it, creating an anchor point for secure hanging. Without them, a nail or screw would just spin around and break out of the wall.

### **Medium duty, 10lbs to 25lbs**

### **Heavy duty, 25lbs to 50lbs**

Any one of these can be purchased at any home improvement stores.

### **Stud Finders**

If you insist on using a regular nail, then we strongly recommend that you use a reliable stud finder. Also, please use at least a 2” nail and drive directly into stud.
